

ECM12

We make every egg count.

ECM12 is a stand-alone egg counter display and egg data controller designed to work together with Accucount Mark 5 and N20 / 40 / 50 egg counters.

Reliability

The unit is sophisticated, yet very user friendly. The controller, combined together with the Accucount egg counting devices are a must for table and breeder laying installations.

The ECM12 records and display input from up to 12 Mark 5 egg counter, or a combination of Mark 5 and N counters.

The ECM12 display show daily and total egg counting for each individual egg counter. All information is stored for up to 7 days in the unit's memory.

Information for each egg counter can be seen individually or combined into groups.

All information can be transferred to a central Windows based computer for complete and central egg management.

Technical specification

Power supply: 230V AC

Inputs: 12 digital inputs

Outputs: 12V AC power supply for egg counter

Display: LCD 16x2

Memory: Memory with power fail protection and non-erasable memory
