

Generator Battery Tester

by Agrologic reliably ensures your generator starts during emergencies.

Reliability

Generator Battery Tester This advanced device is designed to provide peace of mind by helping facility managers and operators maintain optimal generator readiness at all times. By offering real-time insights into battery performance, it significantly reduces the risk of unexpected power outages due to battery failure.

Features include:

- **Continuous battery monitoring:** The system tracks battery status around the clock, alerting you immediately to any loss in charge or deterioration.
- **Scheduled battery quality tests:** Automated testing routines evaluate battery health at regular intervals to ensure reliable performance when needed most.
- **Audio alerts for battery failures:** Built-in alarms notify personnel instantly if a potential issue is detected, enabling swift corrective action.
- **Notifications for generator water temperature:** The unit also monitors generator coolant temperature, sending alerts if readings move outside safe operational ranges to prevent costly damage.

With its robust monitoring capabilities and user-friendly notifications, the Generator Battery Tester by Agrologic helps protect critical operations and safeguard investments in backup power systems.
