

## ACLIMATRON 107

The Aclimatron 107 controller is a simple 4 output control unit that was especially designed to operate cooling systems in poultry houses.

Set the cooling system on temperature, cooling on time and minimum and maximum off times.

As the house temperature rises above the cooling system on temperature, the off time is automatically be reduced.

The unit has a power supply output for the cooling system valve which can supply 12VAC/DC or 24VAC.

Set a humidity set point reading that will turn off the cooling system.

The unit has 3 built-in dry contacts that can be used for controlling house temperature according to temperature or humidity set points.

Aclimatron comes with one temperature sensor. A humidity sensor may be connected to the unit (optional).
